

Al Ain International Airport

Facilities Management, United Arab Emirates

| The challenge

With the Abu Dhabi emirate set to welcome increasing numbers of tourists over the coming years, Al Ain International Airport is fast becoming a significant travel hub in the region. Efficient usage of existing capacity - along with investment in new airport capacity - is essential if the facilities are to meet future growth in demand in a sustainable way. In 2013, Enova was entrusted with the provision of Facilities Management services, allowing Abu Dhabi Airports to focus on their core business.

| Enova's solution

Enova has been offering Facilities Management services to Al Ain International Airport since 2013, delivering guaranteed performance on all the assets managed, streamlining client processes and reducing client's operational costs.

The scope of work includes the implementation and update of Standard Operations Procedures, full technical services covering civil, mechanical, electrical and plumbing (MEP) systems, and specialized airports operation systems.

Enova's daily intervention is not limited to airside buildings: it also encompasses airside activities, including pavement and infrastructure maintenance of critical areas such as the apron, runway and taxiway.

Abu Dhabi, United Arab Emirates

Contract

Date: 2013

Type: Hard FM
